IN BIOMEDICINE

## POSTDOCTORAL FELLOW AT IRB BARCELONA

### POSTDOCTORAL POSITIONS IN THE CHROMATIN STRUCTURE AND FUNCTION LABORATORY (Dr. F. Azorín)

Postdoctoral positions are available in the Chromatin Structure and Function Laboratory to study chromatin organisation and dynamics. The lab's research focuses on the epigenetic regulation of chromatin functions, using yeasts and *Drosophila* as model systems.

Positions are available to start early 2011. Although not a requirement, previous experience in *Drosophila* or yeast genetics and molecular biology would be highly appreciated.

Interested candidates should send their CV and the names of two referees to: Dr. F. Azorín ([ferran.azorin@irbbarcelona.org](mailto:ferran.azorin@irbbarcelona.org)) and Martha Brigg ([martha.brigg@irbbarcelona.org](mailto:martha.brigg@irbbarcelona.org)).
